Session 3: Effective communication of sex and gender issues

Paola Conti, Italy

★ EUROPEAN
★ Gender
★ Medicine

How many key words in common do we have?

Sex&Gender

COMMUNICATION

evidence

© Paola Conti

● Sex&Gender, intersecting age and other specific conditions and health determinants, have to be considered with *appropriate* methods.

● It needs to improve OSH research, epidemiological methods, monitoring and prevention activities by systematically including the gender dimension in order to provide the evidence base for gender impact assessments

Research and communication needs

- *sex&gender interaction* in specific occupational work-related disorder/risk /exposure factor
- knowledge of multifactorial exposure should be developed in S&G perspective
- analysis of costs and benefits of *gender based* OSH prevention
- methodologies to estimate the socioeconomic costs of occupational diseases, work-related stress and violence at work for *men and women*
- *gender based model* of risk communication strategies
- the complex interactions between work-related psychosocial and organisational risk factors, work-related stress, physical inactivity at work, risk behaviours and chronic diseases and health conditions to provide an evidence base
- impact of organisational and psychosocial risk factors in the development of immunological disorders and occupational cancers
